5

WAYS TO KEEP YOUR DOCUMENTS SECURE

Prevent unauthorised copying and sharing of your confidential documents online

1

Copy Protection

Ensure there's no function to highlight text and CTRL+C, thus preventing any copy-and-paste of your content elsewhere.

2

Restrict Print and Download

Enforce a view-only mode for your online documents. Don't risk having people make copies of your files unnecessarily.

3

Dynamic Watermarking

Stamp your documents with a unique customizable text to identify the person viewing it and discourage unauthorized redistribution.

4

Self Destruct or Expiry

Limit how long someone can have access to your file by setting it to expire at a certain time or self-destruct within minutes.

5

Password Protection

Protect your file by locking it with a password. Only those who have the password can successfully unlock and access it.

BONUS
Document Tracking

Are you certain that your document was viewed by the right person?

With live document tracking, find out who's viewing your document, for how long, and how often.

Digify Document Security Made Simple
